General Description

The 885069 is a high performance Bulk Acoustic Wave (BAW) filter designed to meet the strict LTE rejection requirements for use in B40.

885069 is specifically designed to meet the high performance expectations of insertion loss and rejection for LTE uplink systems under all operating conditions.

The 885069 uses common module packaging techniques to achieve the industry standard 1.4 x 1.2 x 0.46 mm footprint.

Notes:

1. All specifications are based on the TriQuint schematic for the main reference design shown on page 3.
2. Typical values are derived through integration of the linear s-parameter over the indicated band at the specified temperature.
3. Integration of the linear s-parameter over an 18 MHz sliding frequency span.
4. This is the optimum impedance in order to achieve the performance shown
