PCB Design Requirements

PCB Surface Finish

The PCB surface finish used for RFMD's qualification process is electroless nickel, immersion gold. Typical thickness is 3µinch to 8µinch gold over 180µinch nickel.

PCB Land Pattern Recommendation

PCB land patterns for RFMD components are based on IPC-7351 standards and RFMD empirical data. The pad pattern shown has been developed and tested for optimized assembly at RFMD. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.

PCB Metal Land and Solder Mask Pattern

Shaded are represents Pin 1 location.

Thermal vias for center slug “B” should be incorporated into the PCB design. The number and size of thermal vias will depend on the application, the power dissipation, and the electrical requirements. Example of the number and size of vias can be found on the RFMD evaluation board layout.

PCB Metal Land and Solder Mask Pattern

Note: If it is desired to build the same PCB to accommodate the RF5602 as well as the RF5623/RF5603 use the following PCB Patterns.

A = 0.280 x 0.450 (mm) Typ
B = 0.450 x 0.280 (mm) Typ
C = 1.800 (mm) Sq

PCB METAL LAND PATTERN

A = 0.390 x 0.560 (mm) Typ
B = 0.560 x 0.390 (mm) Typ
C = 1.900 (mm) Sq

PCB SOLDER MASK PATTERN

A = 0.252 x 0.405 (mm) Typ
B = 0.405 x 0.252 (mm) Typ
C = 1.620 (mm) Sq

PCB STENCIL PATTERN

Note: Thermal vias for center slug "C" should be incorporated into the PCB design. The number and size of thermal vias will depend on the application. Example of the number and size of vias can be found on the RFMD evaluation board layout.
