Unlocking Measurement Insights

Introduction

Keysight Technologies, Inc. has been a leading designer and manufacturer of RF and microwave step attenuators in the global marketplace for more than 60 years. RF and microwave attenuators are used extensively in microwave test systems for signal conditioning between transmitting and receiving of a device under test (DUT). Keysight designs and manufactures a comprehensive range of RF and microwave attenuators to meet your signal attenuation requirements. There is a broad range of fixed, manual, and programmable step attenuators with operating frequencies from DC up to 4/18/26.5/40/50 GHz.

Product Description

Other than connectorized standalone attenuators, Keysight also offers step attenuator modules that operate across a broad frequency range of DC to 26.5/50 GHz. The M9168C/E is a programmable step attenuator module based on the PXI hybrid platform, with 0.03 dB insertion loss repeatability for each section throughout the 5 million cycles operating life. Its excellent attenuation accuracy across a wide operating temperature range ensures precise measurements. The M9168C/E is a signal conditioning module that enhances the measurement accuracy and flexibility of PXI based RF and microwave test systems.

Applications

- RF signal path attenuation simulation
- Engineering verification
- RF receiver sensitivity test
- Adjacent channel interference

Features

- 0.03 dB insertion loss repeatability through-out the operating life of up to 5 million cycles per section
- Broad attenuation range of 0 to 101 dB with 1 dB step
- High attenuation accuracy and flatness of ± 0.4 dB at 26.5 GHz (M9168C) and ± 0.97 at 50 GHz (M9168E)
- Soft front panel is available for ease of use

Customer values

- Peace of mind in technology from Keysight who has a proven track record of providing versatile, quality, RF and microwave step attenuators
- Reduce downtime for recalibration, improve testing efficiency and therefore maximizing throughput
- Maximize measurement accuracy and system flexibility
- Guaranteed precise measurements and stability across a wide temperature range

Easy Setup...Test...and Maintenance

Hardware platform

Connectors

The M9168C/E comes with 3.5 mm (f) (SMA compatible)/2.4 mm (f) high quality RF coaxial connectors for 50 Ω .

Compliance

The M9168C/E is PXI compliant, using either a PXI-H, PXI-1 or cPCI slot. Designed to benefit from fast data interfaces, the M9168C/E can be integrated with other test and automation modules into PXI, Compact PCI®, and Hybrid chassis. The PXI format offers high performance in a small, rugged package, and it's an ideal platform for many automated test systems. A wide array of complementary PXI products are currently available and include multimeters, waveform generators, local oscillators, digitizers, and switch multiplexers.

Software platform

Drivers

Keysight's M9168C/E comes complete with software drivers for Windows XP, Windows Vista, Windows 7, and LabVIEW. Also included are application code examples for LabVIEW, LabWindows/CVI, Visual Studio, C, C++, MATLAB.

Soft Front Panel

The M9168C/E graphical user interface guides developers through the module setup process. Users can quickly configure the module parameters. The interfaces are implemented using the IVI standard supporting both IVI-COM and IVI-C.

Soft front panel of M9168C/E provides an intuitive approach for program simulation and troubleshooting. The soft front panel comes in Uncorrected and Corrected instance.

Uncorrected – User sees the nominal value of the attenuation in this instance, regardless of operating frequency.

Corrected – Calibration data is burnt in the module EEPROM at factory and is unique to each step attenuator module. The corrected data is the attenuation value by frequency. User could read the actual attenuation value that changes with frequency, and with accuracy up to 2 decimal points.

Easy software integration

Keysight's M9168C/E comes complete with software drivers for Windows XP, Windows Vista, Windows 7, and LabView. Also included are application code examples for LabView, LabWindows/CVI, Visual Studio, C, C++, C#, Visual Basic, and MATLAB, which provides the M9168C/E with setup and basic switching functionality. The application code examples are easily modified to quickly integrate the module into your measurement system.

Calibration intervals

The M9168C/E is factory calibrated and shipped with an ISO-9001, NIST-traceable calibration certificate. The recommended calibration interval is 12 months.
