## X-Band Gen IV Klystron High Power Amplifier

for Satellite Communications

# The Gen IV High Power Amplifier

X-Band Gen IV provides up to 3.3 kW of power in a dual drawer package

## **Unmatched Efficiency**

Uses less power and produces less heat than any other K-HPA. Features Power Saver and Power Tracker, optimizing K-HPA efficiency to meet your operating condition.

## **New Features and Options**

Scopescreen provides a graphical log display. The Ethernet Option provides higher speed connections, can update and coordinate all clock settings, and enables a snapshot feature where user can create a file containing all settings, alarms and faults at a single point in time.

#### **Unmatched Size**

Greater efficiency and exceptional thermal margins have enabled CPI to design the smallest KPA on the market --- without the threat of overheating or a shorter klystron life.

## **Greater Reliability**

Low temperatures are the key to longer lifetimes for klystrons and electronic parts. The CPI power supply design and high efficiency, multi-stage depressed collector klystron make these lower temperatures possible.

#### **Useful Displays**

Large, high quality, color, graphical display has a wide viewing angle and asharp appearance. All important functions are clearly displayed, and an event log is included.

## **Integrated Protection Switching**

Redundant switch controller eliminates the cost of external controllers. System status is shown on the display and switch controls are implemented locally on the front panel touch-pad, or remotely via the digital serial interface.

## **Easy Maintenance, Easy Handling**

All areas of the amplifier are easily accessible and there are no large harnesses to get in the way. Separate RF and Power Supply drawers slide out from a standard rack.

## **Acoustically Quiet**

The quietest K-HPA in the industry.

## **Worldwide Support**

Backed by over three decades of satellite communications experience, and CPI's worldwide 24-hour customer support network that includes sixteen regional factory service centers.

811 Hansen Way P.O. Box 51625, Palo Alto, CA 94303

### OPTIONS:

- · Motorized Channel *Selector:* (<1 second)
- Remote Control Panel
- Linearizer
- · L-Band Block Upconverter (BUC) (Contact factory for typical performance specifications with *integrated BUC)*
- Ethernet Interface

## SPECIFICATIONS, X-Band Gen IV Electrical

7.9 - 8.4 GHz Frequency Ranges Klystron Power Output 2.5. 3.0 or 3.3 kW min. (64.0, 64.8 or 65.1 dBm) Amplifier Output 1 2.0, 2.4 or 2.7 kW min.

at flange with harmonic filter (63.0, 63.8 or 64.3 dBm)

Bandwidth 60 MHz (with 2.5 kW klystron) or 45 MHz (with 3.0 kW klystron)

Power Adjustability 0 to -20 dB of output with  $\pm 0.1$  dB

typical resolution

Gain at Rated Power 77 dB, min.

±0.25 dB/24 hr. max. at constant drive Gain Stability vs. Time

and temperature

Gain Stability vs. Temp. 1 dB max. from 20° to 40°C; ±2.5 dB max

from 0° to 50°C (at constant drive) Gain Slope (at rated power) 0.04 dB/MHz max. over Fo  $\pm 30$  MHz

Gain Variation (at rated power) 0.4 dB pk-pk max. over Fo ±30 MHz

Input VSWR 1.25:1 max **Output VSWR** 1.30:1 max.

Load VSWR 2.0:1 max. for full spec. compliance; any value for operation without damage

-50 dBc max., 20 to 400 Hz

Residual AM2 -60 dBc max., 400 Hz to 2 kHz

-80 dBc max., 2 kHz to 500 kHz

AM/PM Conversion 4°/dB max.

(at rated power)

Harmonic Output

with filter: -80 dBc without filter: -35 dBc

-135 dBW/4 kHz, 3.7 - 4.2 GHz Noise and Spurious -65 dBW/4 kHz, 4.2 - 12.0 GHz (at rated gain)

-110 dBW/MHz. 4.2 - 40 GHz. excluding passband

Phase Noise<sup>2</sup> Exceeds requirements of INTELSAT

Standard IESS-308/309 by -10 dB

at -10 dB backoff

-28 dBc with two equal carriers at total output Intermodulation

7 dB below rated single-carrier output

Group Delay In any 40 MHz band:

0.10 ns/MHz linear max. 0.02 ns/MHz<sup>2</sup> parabolic max. 2.0 ns pk-pk ripple max.

All ratings are  $\pm$  10%, 47-63 Hz 3-phase with Primary Power3

neutral and ground: 200 VAC (without neutral)

208 VAC 380 to 415 VAC

480 VAC

Power Factor 0.95 min

<sup>1</sup>Harmonic filter can be removed as an option. Add 0.25 dB to amplifier output for units ordered without

### Electrical (continued)

Power Consumption<sup>4</sup> 9.5 kW max for 3 kW operation. Typical values for the following RF

output backoffs with respect to rated (power saver off): 8.9 kW @ 0 dB (rated) 6.6 kW @ -4 dB 5.6 kW @ -7 dB 5.2 kW @ -10 dB 4.8 kW @ -13 dB

8.0 kW max for 2.5 kW operation

Inrush Current, peak 180% of normal line current peak

max. (first half-cycle only)

#### Mechanical

**RF Power Monitors** 

**RF Input Connection** Type N female

**RF Output Connection** WR-112 with grooved flange

Type N female

Dimension (W x H x D without fans and handles) RF Drawer 19 x 17.5 x 28 in. (483 x 445 x 711 mm) PS Drawer 19 x 8.75 x 24 in. (483 x 223 x 610 mm)

Weight

RF Drawer 180 lbs w/klystron (81.7 kg)

PS Drawer 100 lbs (45.4 kg)

Cooling Forced air with integral blower and fans; separate klystron

collector cooling path

175 cfm min., at sea level Air Flow Rate, Klystron

External Ducts Backpressure 0.5 inch water gauge total, maximum.

Klystron Heat Loss 5300 W max. Heat Loss in Room 2000 W max.

(cabinet less Klystron)

Acoustic Noise 63 dBA nominal, measured

3 ft. from front of equipment

## **Environmental**

non-operating:

**Ambient Temperature** -10° to +50° operating:

-40° to +80° non-operating

Relative Humidity 95%, non-condensing

Altitude

10,000 ft. (3000 m) with standard operating:

adiabatic temp derating of 2°C/1000 ft. or 6.5°C/km 40,000 ft. (12,000 m)

Shock and Vibration As normally encountered

in satellite earth stations

and shipping

<sup>3</sup>AC current harmonic content: less than 20%, primarily fifth and seventh harmonics. Harmonics must be considered when choosing UPS sources

<sup>&</sup>lt;sup>2</sup>Prime power AC line unbalance not to exceed 3%. Excess imbalance may cause an increase in residual RF noise (AM, FM and PM). Phase noise increase is typically 2.5 dB / % imbalance.

 $<sup>^4</sup>$ Lower power consumption can be achieved if power saver (included as standard) is employed when operating below rated output power

Please check CPI's web site to ensure most current data sheet.
