

Applications

- Military radar
- Civilian radar
- Land mobile and military radio communications
- Test instrumentation
- Wideband and narrowband amplifiers
- Jammers

Product Features

- Frequency: 0.03 to 4.0 GHz
- Output Power (P_{3dB}): 36.0 W at 2 GHz
- Linear Gain: 19.3 dB at 2 GHz
- Typical PAE_{3dB} : 72.7% at 2 GHz
- Operating Voltage: 32 V
- Low thermal resistance package
- CW and Pulse capable
- 3 x 4 mm package

General Description

The TriQuint TGF3021-SM is a 30 W (P_{3dB}) discrete GaN on SiC HEMT which operates from 0.03 to 4.0 GHz. The device is constructed with TriQuint's proven TQGaN25 process, which features advanced field plate techniques to optimize power and efficiency at high drain bias operating conditions. This optimization can potentially lower system costs in terms of fewer amplifier line-ups and lower thermal management costs.

The device is housed in an industry-standard 3 x 4 mm surface mount QFN package.

Lead-free and ROHS compliant

Evaluation boards are available upon request.

Functional Block Diagram

Pin Configuration

Pin No.	Label
11 - 16	V_D / RF OUT
1 - 6	V_G / RF IN
7 – 10, 20 - 17	NC
Back side	Source

Ordering Information

Part	ECCN	Description
TGF3021-SM	EAR99	QFN Packaged Part
TGF3021-SM-EVB1	EAR99	0.03 – 0.512 GHz EVB

Absolute Maximum Ratings

Parameter	Value
Breakdown Voltage (BV_{DG})	100 V min.
Gate Voltage Range (V_G)	-10 to 0 V
Drain Current (I_D)	5.8 A
Gate Current (I_G)	-7.5 to 16.8 mA
Power Dissipation (P_D)	32.3 W
RF Input Power, CW, T = 25°C (P_{IN})	See page 10.
Channel Temperature (T_{CH})	275 °C
Storage Temperature	-40 to 150 °C

Operation of this device outside the parameter ranges given above may cause permanent damage. These are stress ratings only, and functional operation of the device at these conditions is not implied.

Recommended Operating Conditions

Parameter	Value
Drain Voltage (V_D)	32 V (Typ.)
Drain Quiescent Current (I_{DQ})	65 mA (Typ.)
Peak Drain Current (I_D)	1800 mA (Typ.)
Gate Voltage (V_G)	-2.7 V (Typ.)
Channel Temperature (T_{CH})	225 °C (Max)
Power Dissipation, CW (P_D) ²	25.7 W (Max)
Power Dissipation, Pulse (P_D) ³	41.5 W (Max)

¹ Electrical specifications are measured at specified test conditions.

Specifications are not guaranteed over all recommended operating conditions.

² Package at 85 °C

³ 100µs Pulse Width, 20 % Duty Cycle, package at 85 °C

Pulsed RF Characterization – Load Pull Performance

Test conditions unless otherwise noted: $T_A = 25\text{ }^\circ\text{C}$, $V_D = 32\text{ V}$, $I_{DQ} = 65\text{ mA}$, Pulse: 100uS Pulse Width, 20 % Duty Cycle

Load Pull Smith Charts - Pulsed (1, 2, 3)

RF performance that the device typically exhibits when placed in the specified impedance environment. The impedances are not the impedances of the device, they are the impedances presented to the device via an RF circuit or load-pull system. The impedances listed follow an optimized trajectory to maintain high power and high efficiency.

Notes:

1. 32 V, 65 mA, Pulsed signal with 100 uS pulse width and 20 % duty cycle. 3 dB compression referenced to peak gain.
2. See page 30 for load pull and source pull reference planes.
3. NaN means the impedances are undefined in load-pull system.

1.5GHz, Load-pull

Load Pull Smith Charts - Pulsed (1, 2, 3)

RF performance that the device typically exhibits when placed in the specified impedance environment. The impedances are not the impedances of the device, they are the impedances presented to the device via an RF circuit or load-pull system. The impedances listed follow an optimized trajectory to maintain high power and high efficiency.

Notes:

1. 32 V, 65 mA, Pulsed signal with 100 uS pulse width and 20 % duty cycle. 3 dB compression referenced to peak gain.
2. See page 30 for load pull and source pull reference planes.
3. NaN means the impedances are undefined in load-pull system.

2GHz, Load-pull

Load Pull Smith Charts - Pulsed (1, 2, 3)

RF performance that the device typically exhibits when placed in the specified impedance environment. The impedances are not the impedances of the device, they are the impedances presented to the device via an RF circuit or load-pull system. The impedances listed follow an optimized trajectory to maintain high power and high efficiency.

Notes:

1. 32 V, 65 mA, Pulsed signal with 100 uS pulse width and 20 % duty cycle. 3 dB compression referenced to peak gain.
2. See page 30 for load pull and source pull reference planes.
3. NaN means the impedances are undefined in load-pull system.

2.5GHz, Load-pull

Load Pull Smith Charts - Pulsed (1, 2, 3)

RF performance that the device typically exhibits when placed in the specified impedance environment. The impedances are not the impedances of the device, they are the impedances presented to the device via an RF circuit or load-pull system. The impedances listed follow an optimized trajectory to maintain high power and high efficiency.

Notes:

1. 32 V, 65 mA, Pulsed signal with 100 uS pulse width and 20 % duty cycle. 3 dB compression referenced to peak gain.
2. See page 30 for load pull and source pull reference planes.
3. NaN means the impedances are undefined in load-pull system.

3GHz, Load-pull

Load Pull Smith Charts - Pulsed (1, 2, 3)

RF performance that the device typically exhibits when placed in the specified impedance environment. The impedances are not the impedances of the device, they are the impedances presented to the device via an RF circuit or load-pull system. The impedances listed follow an optimized trajectory to maintain high power and high efficiency.

Notes:

1. 32 V, 65 mA, Pulsed signal with 100 uS pulse width and 20 % duty cycle. 3 dB compression referenced to peak gain.
2. See page 30 for load pull and source pull reference planes.
3. NaN means the impedances are undefined in load-pull system.

3.5GHz, Load-pull

Load Pull Smith Charts - Pulsed (1, 2, 3)

RF performance that the device typically exhibits when placed in the specified impedance environment. The impedances are not the impedances of the device, they are the impedances presented to the device via an RF circuit or load-pull system. The impedances listed follow an optimized trajectory to maintain high power and high efficiency.

Notes:

1. 32 V, 65 mA, Pulsed signal with 100 uS pulse width and 20 % duty cycle. 3 dB compression referenced to peak gain.
2. See page 30 for load pull and source pull reference planes.
3. NaN means the impedances are undefined in load-pull system.

4GHz, Load-pull

Load Pull Smith Charts - CW (1, 2, 3)

RF performance that the device typically exhibits when placed in the specified impedance environment. The impedances are not the impedances of the device, they are the impedances presented to the device via an RF circuit or load-pull system. The impedances listed follow an optimized trajectory to maintain high power and high efficiency.

Notes:

4. 32 V, 65 mA. 1 dB compression referenced to peak gain.
5. See page 30 for load pull and source pull reference planes.
6. NaN means the impedances are undefined in load-pull system.

2GHz, Load-pull

Load Pull Smith Charts - CW (1, 2, 3)

RF performance that the device typically exhibits when placed in the specified impedance environment. The impedances are not the impedances of the device, they are the impedances presented to the device via an RF circuit or load-pull system. The impedances listed follow an optimized trajectory to maintain high power and high efficiency.

Notes:

4. 32 V, 65 mA. 1 dB compression referenced to peak gain.
5. See page 30 for load pull and source pull reference planes.
6. NaN means the impedances are undefined in load-pull system.

2.5GHz, Load-pull

Load Pull Smith Charts - CW (1, 2, 3)

RF performance that the device typically exhibits when placed in the specified impedance environment. The impedances are not the impedances of the device, they are the impedances presented to the device via an RF circuit or load-pull system. The impedances listed follow an optimized trajectory to maintain high power and high efficiency.

Notes:

4. 32 V, 65 mA. 1 dB compression referenced to peak gain.
5. See page 30 for load pull and source pull reference planes.
6. NaN means the impedances are undefined in load-pull system.

3GHz, Load-pull

Load Pull Smith Charts - CW (1, 2, 3)

RF performance that the device typically exhibits when placed in the specified impedance environment. 3.5GHz, Load-pull

Typical Pulsed Performance – Power Tuned^(1,2,3)

Notes:

1. Pulsed signal with 100 uS pulse width and 20 % duty cycle
2. See page 20 for load pull and source pull reference planes where the performance was measured.

Typical Pulsed Performance – Efficiency Tuned^(1,2,3)

Notes:

1. Pulsed signal with 100 uS pulse width and 20 % duty cycle
2. See page 20 for load pull and source pull reference planes where the performance was measured.

Typical CW Performance – Power Tuned^(1,2,3)

Notes:

- Pulsed signal with 100 uS pulse width and 20 % duty cycle
- See page 20 for load pull and source pull reference planes where the performance was measured.

Typical CW Performance – Efficiency Tuned^(1,2,3)

Notes:

1. Pulsed signal with 100uS pulse width and 20% duty cycle
2. See page 20 for load pull and source pull reference planes where the performance was measured.

0.03 – 0.512 GHz Evaluation Board Performance Over Temperature (1, 2)

Performance measured on TriQuint's 0.03 GHz to 0.512 GHz Evaluation Board

Notes:

1. Test Conditions: $V_{DS} = 32\text{ V}$, $I_{DQ} = 65\text{ mA}$
2. Test Signal: CW

0.03 – 0.512 GHz Evaluation Board Performance At 25 °C^(1, 2)

Performance measured on TriQuint's 0.03 GHz to 0.512 GHz Evaluation Board

Notes:

1. Test Conditions: $V_{DS} = 32\text{ V}$, $I_{DQ} = 65\text{ mA}$
2. Test signal: CW

0.03 – 0.512 GHz Evaluation Board Performance - Two-Tone Measurements⁽¹⁾

⁽¹⁾ The Intermodulation Distortion products (IMD) are referenced to peak-envelope output power, which is 6 dB above single-tone output power.

0.03 – 0.512 GHz Application Circuit

Bias-up Procedure

1. V_G set to -5 V.
2. V_D set to 32 V.
3. Adjust V_G more positive until quiescent I_D is 65 mA.
4. Apply RF signal.

Bias-down Procedure

1. Turn off RF signal.
2. Turn off V_D and wait 1 second to allow drain capacitor dissipation.
3. Turn off V_G .

0.03 – 0.512 GHz Evaluation Board Layout

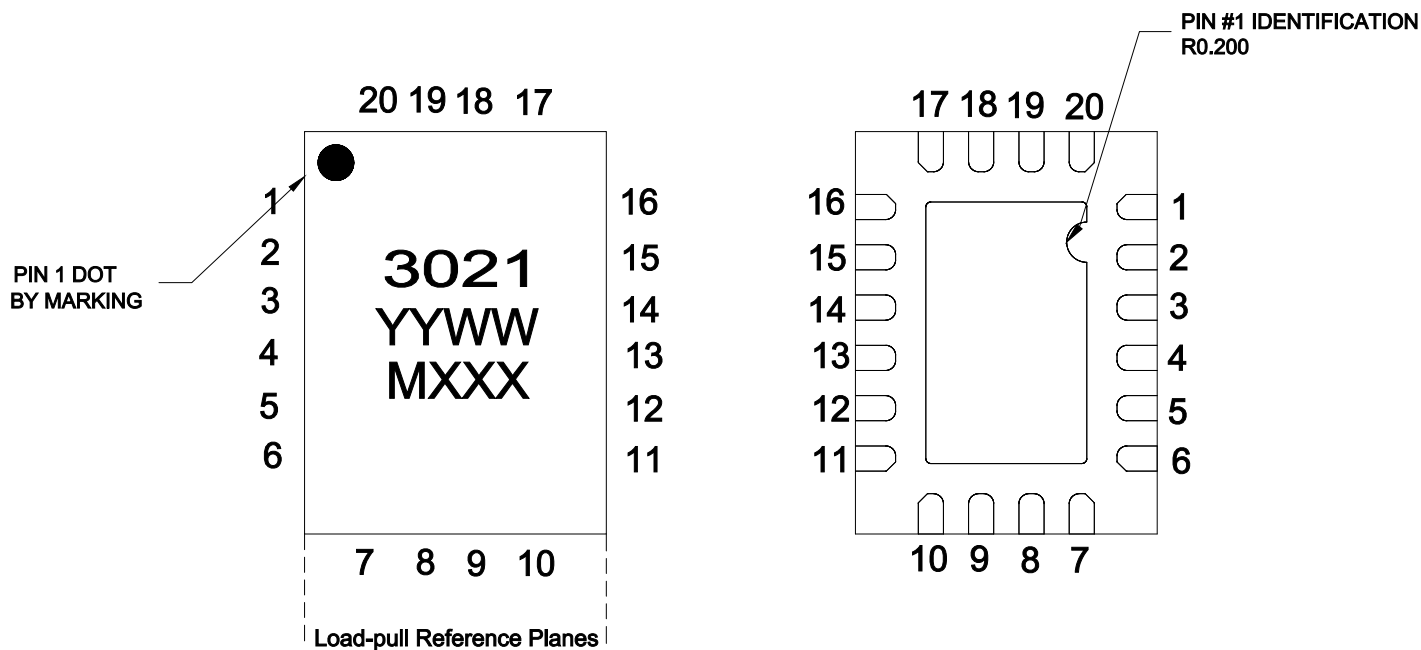

Top RF layer is 0.020" thick Rogers RO4350B, $\epsilon_r = 3.48$. The pad pattern shown has been developed and tested for optimized assembly at TriQuint Semiconductor. The PCB land pattern has been developed to accommodate lead and package tolerances.

0.03 – 3 GHz EVB Bill of Materials

Pin Layout

Pin Description

Pin	Symbol	Description
11 - 16	V_D / RF OUT	Drain voltage / RF Output to be matched to 50 ohms; see EVB Layout on page 19 as an example.
1 - 6	V_G / RF IN	Gate voltage / RF Input to be matched to 50 ohms; see EVB Layout on page 19 as an example.
7 – 10, 17 - 20	NC	Not connected
Back side	Source	Source connected to ground

Notes:

Thermal resistance measured to back side of package

The TGF3021-SM will be marked with the “3021” designator and a lot code marked below the part designator. The “YY” represents the last two digits of the calendar year the part was manufactured, the “WW” is the work week of the assembly lot start, and the “MXXX” is the production lot number.

Mechanical Information

All dimensions are in millimeters.

A	MAX.	0.900
	NOM.	0.850
	MIN.	0.800

Note:

Unless otherwise noted, all dimension tolerances are +/-0.127 mm.
 This package is lead-free/RoHS-compliant. The plating material on the leads is NiAu. It is compatible with both lead-free (maximum 260 °C reflow temperature) and tin-lead (maximum 245°C reflow temperature) soldering processes.

Product Compliance Information

ESD Sensitivity Ratings

Caution! ESD-Sensitive Device

ESD Rating: Class 1B
 Value: Passes 600 V min.
 Test: Human Body Model (HBM)
 Standard: JEDEC Standard JESD22-A114

MSL Rating

The part is rated Moisture Sensitivity Level 3 at 260°C per JEDEC standard IPC/JEDEC J-STD-020.

ECCN

US Department of Commerce EAR99

Solderability

Compatible with the latest version of J-STD-020, Lead free solder, 260 °C

RoHS Compliance

This part is compliant with EU 2002/95/EC RoHS directive (Restrictions on the Use of Certain Hazardous Substances in Electrical and Electronic Equipment).

This product also has the following attributes:

- Lead Free
- Halogen Free (Chlorine, Bromine)
- Antimony Free
- TBBP-A (C₁₅H₁₂Br₄O₂) Free
- PFOS Free
- SVHC Free

Recommended Soldering Temperature Profile
