Peak Power Handling: 100W (pulsed)

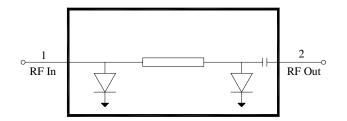

Flat Leakage: 16 dBmReturn Loss: 15 dB

Passive (no DC bias required)

· Integrated DC Block on output

• Chip Dimensions: 2.0 x 2.5 x 0.1 mm

## **Functional Block Diagram**

# **General Description**

The TriQuint TGL2207 is a high power, wideband MMIC GaAs VPIN limiter capable of protecting sensitive receive channel components against high power incident signals. The TGL2207 does not require DC bias and achieves a low insertion loss all in a small form factor. These features allow for simple integration with minimal impact to system performance.

The TGL2207 operates from 2 to 5 GHz and achieves low insertion loss of 0.5 dB and return loss of 15 dB. It can limit up to 100 W incident pulsed-power with a low flat leakage of 16 dBm.

The TGL2207 has a protective surface passivation layer providing environmental robustness and is ideally suited to support both commercial and defense related applications.

Lead-free and RoHS compliant.

## **Assembly Notes**

Component placement and adhesive attachment assembly notes:

- Vacuum pencils and/or vacuum collets are the preferred method of pick up.
- Air bridges must be avoided during placement.
- The force impact is critical during auto placement.
- Solder or Organic Adhesive attachment can be used for TGL2205.
- Curing should be done in a convection oven; proper exhaust is a safety concern.

#### Solder attachment reflow process assembly notes:

• Use AuSn (80/20) solder and limit exposure to temperatures above 300 °C to 3 to 4 minutes, maximum.

- 5 of 6 -

- An alloy station or conveyor furnace with reducing atmosphere should be used.
- · Do not use any kind of flux.
- · Coefficient of thermal expansion matching is critical for long-term reliability.
- Devices must be stored in a dry nitrogen atmosphere.

### Organic adhesive attachment assembly notes:

- The organics such as epoxy or polyimide can be used.
- Epoxies cure at temperatures of 100 to 200 ℃.

#### Interconnect process assembly notes:

- Thermosonic ball bonding is the preferred interconnect technique.
- Force, time, and ultrasonics are critical parameters.
- · Aluminum wire should not be used.
- Devices with small pad sizes should be bonded with 0.0007-inch wire.
