Planar-Doped Barrier Diode Detectors 0.01 to 50 GHz

8474B DETECTOR NEG SERIAL 00100 2032A AVOID STATIC DISCHAR Data Sheet

Introduction

Features and Description

- Exceptional flatness
- Broadband from 0.01 to 50 GHz
- Extremely temperature stable
- Environmentally rugged

The 8474 series of coaxial detectors are specifically designed for use in microwave instrumentation and systems. These detectors utilize a GaAs diode matched to a 50 Ω transmission line with a miniature thin film circuit.

The diodes are a Planar-Doped Barrier (PDB) structure fabricated by use of Molecular Beam Epitaxy technology. This combination yields a device which has superior characteristics to point-contact and low-barrier Schottky devices. These characteristics are reflected in frequency response specification and in square law response vs. frequency (Figure 7) with PDB detectors showing a maximum square law response variation of 3% from 2 to 18 GHz vs. 9.5% for Schottky detectors.

These detectors are extremely rugged with high resistance to ESD damage and are less sensitive to temperature change than either point-contact or Schottky diodes. These products offer 10 MHz to 50 GHz performance with the 2.4 mm connector (8474E) or narrower frequency coverage with APC-7 Type N or SMAcompatible 3.5 mm and 2.92 mm connectors. There is no need to order matched pairs because the frequency tracking is better than the original matched pair specifications.

Typical values:

 R_v (diode video impedance) ~ 1.5 k Ω^*

C_B (RF bypass capacitor) ~ 27 pF nominal

TR (10 to 90% risetime) ~ 2.2
$$\frac{(R_{LOAD})(R_V)}{R_{LOAD} + R_V}(C_B + C_{LOAD}) = \frac{0.35}{BW}$$
