

2000 Watt C and X-Band Dual-Band Rack Mount High Power Amplifier

FEATURES

- *Compact 11RU size*
- *High efficiency*
- *Menu driven front panel display & control*
- *Power factor correction*
- *Optional integrated linearizer*
- *Redundant system mounts in single rack*

XTRD-2000CX digital rack-mount amplifiers are designed for fixed (ground and shipboard) as well as mobile uplink applications and occupy only 11 rack units while providing RF output of 2000 Watts. These high efficiency traveling wave tube amplifiers include RF gain control, a solid-state pre-amplifier, RF filters, cooling, and monitor & control (M&C) systems.

The dual-drawer amplifier conserves rack space and occupies only 19.25 inches (11 rack units) of a standard 19 inch rack cabinet. A complete 1:1 or 1:2 redundant TWTA system, including a redundant controller, can be mounted in a single rack.

The unit features a menu-driven front panel display and RS-232 & RS-422/RS-485 serial port interfaces for complete remote control. Gain control is set by the front panel manual control or by computer commands sent via the remote interface(s).

The units incorporate high efficiency, multi-stage depressed collector TWTs. Reliability is enhanced because both prime power consumption and internal operating temperatures are reduced for the linear and saturated modes of operation. The high frequency resonant conversion power supply is highly efficient and allows for quick recovery from prime power outages. Depending upon user requirements, the high power amplifiers can be configured for single-thread, or redundant operation.
