MACOM™

HMIC™ PIN Diode SP2T 20 Watt Switch for 0.05 - 6.0 GHz Higher Power Applications

Rev. V5

Features

- Exceptional Broadband Performance, 0.05 - 6.0 GHz
- Low Loss: Tx = 0.24 dB Avg @ 2025 MHz, 35mA
- Tx = 0.38 dB Avg @ 3500 MHz, 35mA
- High Isolation: Rx = 31.0 dB Avg @ 2025 MHz
- Rx = 27 dB Avg @ 3500 MHz
- High RF C.W. Input Power: 20 W C.W. (Tx-Ant Port)
- Higher IIP3: > 64 dBm (Tx-Ant Port)
- Suitable for High Power TD-SCDMA & WiMAX Applications
- Surface Mount 3mm PQFN Package
- RoHS* Compliant and 260°C Re-flow Compatible

Description and Applications

The MASW-000825-12770T is a compact SP2T PIN diode switch in a lead-free 3mm MLP plastic package that offers extraordinary performance with excellent isolation to loss ratio for both T_X and R_X states. The SP2T provides outstanding 20 W C.W. power handling coupled with 64 dBm IIP3 for maximum switch performance.

The MASW-000825-12770T is a 0.05 - 6.0GHz SP2T High Peak and Average Power PIN diode switch used for T/R or LNA Protect Switch applications such as WiMAX and TD-SCDMA.

This device incorporates a PIN diode die fabricated with M/A-COM Technology Solutions patented Silicon-Glass HMIC™ process. This chip features two silicon pedestals embedded in a low loss, low dispersion glass. The diodes are formed on the top of each pedestal. The topside is fully encapsulated with silicon nitride and has an additional polymer passivation layer. These polymer protective coatings prevent damage and contamination during handling and assembly.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These devices are rated Class 1B Human Body. Proper ESD control techniques should be used when handling these devices.

1. Exceeding these limits may cause permanent damage.

2. Refer to page 7 of the datasheet for power handling curves.

Notes:
1. **Data is taken on M/A-COM evaluation board 1000029181-0000001 @ 25C by removing peripheral board losses (connectors, transmission line, and bias elements).**
2. **Typical PIN Diode Forward Voltage = + 0.9 V @ + 35 mA for Insertion Loss.**
   Typical PIN Diode Reverse Voltage = 28 V – 1.0 V = 27 V for Isolation.
3. **Switch is Asymmetrical, + 43 dBm RF C.W. Input Power Applies to Tx Port Only.**
4. **Center Ground Area of MLP 3mm Package must be Attached to Thermal Ground for Optimum RF Power Performance.**
5. **M/A-Com Recommends the usage of the MADR-008888-000100 driver with this switch.**
