

Features

- HSDPA and HSPA+ Compliant
- Low Voltage Positive Bias Supply (3.0V to 4.35V)
- +28.0dBm Linear Output Power (+26.5dBm HSDPA)
- High Efficiency Operation
41% at $P_{OUT}=+28.0\text{dBm}$
22% at $P_{OUT}=+18.0\text{dBm}$
11% at $P_{OUT}=+10.0\text{dBm}$
- Low Quiescent Current in Low Power Mode: 6mA
- Internal Voltage Regulator Eliminates the Need for External Reference Voltage (V_{REF})
- 3-Mode Power States with Digital Control Interface
- Integrated Power Coupler
- Integrated Blocking and Collector Decoupling Capacitors

Applications

- WCDMA/HSDPA/HSUPA Wireless Handsets and Data Cards
- Dual-Mode UMTS Wireless Handsets

Functional Block Diagram

Product Description

The RF7225 is a high-power, high-efficiency, linear power amplifier designed for use as the final RF amplifier in 3V, 50Ω W-CDMA mobile cellular equipment and spread-spectrum systems. This PA is developed for UMTS Band 5 which operates in the 824MHz to 849MHz frequency band. The RF7225 has two digital control pins to select one of three power modes to optimize performance and current drain at lower power levels. The part also has an integrated directional coupler which eliminates the need for an external discrete coupler at the output. The RF7225 is fully HSDPA and HSPA+ compliant and is assembled in a 10-pin, 3mmx3mm module.

RF - Output Power	+30	dBm
Output Load VSWR (Ruggedness)	10:1	
Operating Ambient Temperature	-30 to +110	°C
Storage Temperature	-55 to +150	°C

Caution! ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

Pin	Function	Description
1	VBAT	Supply voltage for bias circuitry.
2	RF IN	RF input internally matched to 50Ω and DC blocked. Input matching includes a shunt inductor to ground which would short DC voltage placed on this pin.
3	VMODE1	Digital control input for power mode selection (see Operating Modes truth table).
4	VMODE0	Digital control input for power mode selection (see Operating Modes truth table).
5	VEN	Digital control input for PA enable and disable (see Operating Modes truth table).
6	CPL_OUT	Coupler output.
7	GND	This pin must be grounded.
8	CPL_IN	Coupler input used for cascading couplers in series. Terminate this pin with a 50Ω resistor if not connected to another coupler.
9	RF OUT	RF output internally matched to 50Ω and DC blocked.
10	VCC	Supply voltage for the first and second stage amplifier.
Pkg Base	GND	Ground connection. The package backside should be soldered to a topside ground pad connecting to the PCB ground plane with multiple ground vias. The pad should have a low thermal resistance and low electrical impedance to the ground plane.

V _{EN}	V _{MODE0}	V _{MODE1}	V _{BAT}	V _{CC}	Conditions/Comments
Low	Low	Low	3.0V to 4.35V	3.0V to 4.35V	Power down mode
Low	X	X	3.0V to 4.35V	3.0V to 4.35V	Standby Mode
High	Low	Low	3.0V to 4.35V	3.0V to 4.35V	High power mode
High	High	Low	3.0V to 4.35V	3.0V to 4.35V	Medium power mode
High	High	High	3.0V to 4.35V	3.0V to 4.35V	Low power mode

Preliminary Application Schematic

NOTES:

- 1 Place these capacitors as close to PA as possible.
- 2 50 Ω resistor will be removed if pin 8 is connected to another coupler.

PCB Design Requirements

PCB Surface Finish

The PCB surface finish used for RFMD's qualification process is electroless nickel, immersion gold. Typical thickness is 3 μ inch to 8 μ inch gold over 180 μ inch nickel.

PCB Land Pattern Recommendation

PCB land patterns for RFMD components are based on IPC-7351 standards and RFMD empirical data. The pad pattern shown has been developed and tested for optimized assembly at RFMD. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.

PCB Metal Land Pattern

PCB Metal Land Pattern (Top View)

PCB Solder Mask Pattern

Liquid Photo-Imageable (LPI) solder mask is recommended. The solder mask footprint will match what is shown for the PCB metal land pattern with a 2mil to 3mil expansion to accommodate solder mask registration clearance around all pads. The center-grounding pad shall also have a solder mask clearance. Expansion of the pads to create solder mask clearance can be provided in the master data or requested from the PCB fabrication supplier.

Thermal Pad and Via Design

The PCB land pattern has been designed with a thermal pad that matches the die paddle size on the bottom of the device.

Thermal vias are required in the PCB layout to effectively conduct heat away from the package. The via pattern has been designed to address thermal, power dissipation and electrical requirements of the device as well as accommodating routing strategies.

The via pattern used for the RFMD qualification is based on thru-hole vias with 0.203mm to 0.330mm finished hole size on a 0.5mm to 1.2mm grid pattern with 0.025mm plating on via walls. If micro vias are used in a design, it is suggested that the quantity of vias be increased by a 4:1 ratio to achieve similar results.
