

RFCA8830

High Linearity, Low Noise, 19 dB Gain Block

The RFCA8830 is a GaAs pHEMT RF balanced amplifier IC with a 45MHz to 1218MHz operating bandwidth. This IC is designed to provide a low noise, high linearity, and high gain for use as a Post Amplifier in Optical Receivers or low noise balanced preamp. The IC uses a 5V power supply for applications requiring lower power dissipation. It is designed to support the new DOCSIS 3.1 Data Over Cable specification.
