

Description

- A GNSS disciplined OCXO incorporating sync to a 1PPS input and 1PPS output. Compatible with GPS, GLONASS, BEIDOU and GALILEO.
Holdover stability up to 1.5µs over 24hours, achieved using an adaptive algorithm.
Internal parameters of the algorithm, including maintenance alarms and message are available to the user via serial port.
Frequency stability better than 1E-12
- Application Information (Reference Drawing):
Connect the 1PPS output of your GPS system to the IQCM-100. A MCU can be used to monitor the working state of the IQCM-100.
- Working States (Reference Drawing):
Run1: Fast track. Adjust the OCXO 10MHz output frequency quickly to track the 1PPS to 10MHz with 1PPS reference.
Run2: Slow track. Adjust the OCXO 10MHz output frequency slowly when phase error is in the defined range.
Holdover: No 1PPS input present; an algorithm enables adaptive modelling of the frequency stability of an OCXO with reference to the GPS timing signal.
Free Run: Clock module powered up with no 1PPS input.
- Note1: The IQCM-100 should be left powered and running for 7 days minimum before operation to allow for the OCXO's internal drift to stabilise.
Note2: The adaptive module algorithm can be built after two days operation with good GPS signal, however this data will be lost at power down.
Note3: When State input (Pin 8) is set low the IQCM-100 will operate in Holdover mode regardless of the 1PPS signal condition.
- Output Data Word Example:
\$PDP,00,0,F,1,-3095,32768.0000,32768.0000,000,000,000000.

Frequency Parameters

- Frequency 10.0MHz
- 10MHz RF Output Details, Pin 2:
HCMOS Compatible, 15pF load
(Sinewave 50Ω option available)
VoH: 2.7V min
VoL: 0.4V max
Rise and Fall time: 8ns max
Duty Cycle: 45/55% max
Accuracy (24-hour averaging when locked to 1PPS): $\pm 1E-12$
Short Term Stability (tested after power for 1hr ref to 25°C, 1s, using PN9000 test equipment): $2E-11$ max
Ageing (Vs and temperature constant, reference to T=25°C, Vs = 5.0V and after 30 days operation): ± 0.2 ppb per day, ± 10 ppb per year
- 24Hrs Holdover capability vs temperature change
For $\pm 1.5\mu s$ $\Delta T < \pm 5^\circ C$ standard option
Reference 7 days powered on, 2 days GNSS lock
Temperature varied $< 1^\circ C/min$ within operating temperature range

Total temperature change	Holdover capability
$\Delta T < \pm 5^\circ C$	$\pm 1.5\mu s$ max (specified)
$\Delta T < \pm 10^\circ C$	$\pm 2.4\mu s$ max
$\Delta T < \pm 20^\circ C$	$\pm 4.1\mu s$ max
- 1.5μs Holdover capability vs temperature change
For $\pm 1.5\mu s$ $\Delta T < \pm 5^\circ C$ standard option
Reference 7 days powered on, 2 days GNSS lock
Temperature varied $< 1^\circ C/min$ within operating temperature range

Total temperature change	Max time with $\pm 1.5\mu s$
$\Delta T < \pm 5^\circ C$	24Hrs (Specified)
$\Delta T < \pm 10^\circ C$	15Hrs
$\Delta T < \pm 20^\circ C$	9hrs

Electrical Parameters

- Supply Voltage 5.0V $\pm 5\%$
- 1PPS Reference Input, Pin 10 (50Ω test condition):
Waveform: HCMOS
ViH: 2.7V min
ViL: 0.4V max
Pulse Width: 10us min
Stability: 200ns max
- State Input, Pin 8 ($< 5mA$ load):
Lock: 2.7V min
Unlock: 0.4V max
- Power Supply Details, Pin 12:
Supply Voltage: 5.0V $\pm 5\%$
Current Consumption: 2.5A during warm up, 1A steady state @25°C
Warm up time: 15mins
AC Ripple: 50mV pk-pk max, 10Hz to 1MHz
12.0V supply voltage also available, please contact our sales office for details.

Operating Temperature Ranges

- -20 to 75°C

**Output Details**

- Output Compatibility HCMOS
- 1PPS Reference Output, Pin 3 (15pF test condition):
Waveform: HCMOS
VoH: 2.7V min
VoL: 0.4V max
Pulse Width: 10µs min
Phase Accuracy
<30min after GNSS lock status: ±200ns
>30min after GNSS lock status: ±80ns
Phase Accuracy RMS
>24hrs after GNSS lock status: ±25ns
- Lock Status Indicator, Pin 5:
Module Locked: 2.7V min
Module Holdover: 0.4V max
Module Locked means Working State is = Run2
- Serial Interface (pin6 and pin7)
UART
VoL and ViL: 0.4V max
VoH and ViH: 2.7V min
Baud rate: 9600
Bits: 8
Paraty: N
Stop Bit: 1

Noise Parameters

- Phase Noise on 10MHz RF output signal (dBm/Hz)

Offset	Typical	Max
10Hz	-125	-120
100Hz	-140	-135
1kHz	-148	-143
10kHz	-152	-147
100kHz	-155	-150
1MHz	-155	-150

Environmental Parameters

- Operating Temperature Range: -20 to 75°C
- Storage Conditions:
Temperature: -55 to 105°C
Humidity: 30 to 80%
- Shock: IEC68-2-27 Test Ea, severity 50A, 50G 11ms half sinewave, 3 times in three mutually perpendicular axes
- Vibration: IEC 68-2-06 Test Fc, 10G, 0.75mm acceleration, 10Hz to 500Hz, 3 times in three mutually perpendicular axes

Manufacturing Details

- ESD Level:
ANSI/ESDA/JEDEC JS-001-2010; HBM Class 2; 2kV to 4kV
ANSI/ESDA/JEDEC JS-001-2010; Machine Model Class B
200V to 400V

- Holdover Options ref 24hrs holdover period

 $\pm 8.0 \mu\text{s}$ $\Delta T < \pm 2^\circ\text{C}$ $\pm 8.0 \mu\text{s}$ $\Delta T < \pm 2^\circ\text{C}$

Note: Holdover stability options will affect capability

■ RoHS Status	Compliant
■ REACH Status	Compliant
■ MSL Rating (JDEC-STD-033):	Not Applicable

- Pack Style: Bulk Loose in bulk pack
Pack Size: 1
